## Programmer (test example)

Select the appropriate datatype to pass using the GetComponent method to initialize the variables.

```

    ○ ○ ○ ○

public class ExampleClass : MonoBehaviour
{

    [Tab]private Rigidbody rb;
    [Tab]private Animator anim;

    [Tab]void Start()
    [Tab]{

    [Tab]anim = gameObject.GetComponent< Choose One... > ();
    [Tab]rb = gameObject.GetComponent< Choose One... > ();

    [Tab]};
}
    
```

You have been asked to create a simple animation controller for the player. The player is expected to have jump/fall, idle, and walking animations with an Any State and Entry. The player can jump/fall at any given time during any other animation. Match each animation state to the appropriate number in the graphic below:

```

    ○ ○ ○ ○
